### Outline

- About CP Kelco
- Raw data used for training
- Machine Learning Apps and models tested
- Data structure and pre-processing
- Regression Learner App results
- PLS Toolbox App results
- What is XGB?
- Learnings and next step
- Questions?

### **About CP Kelco**

CP Kelco is a leading global producer and innovator of nature-based specialty ingredients made from:

Gellan gun entation Derived Cellulose Carrageenan Diutan g

Extensive portfolio of versatile, high-performance solutions.

Industry renowned technical support, quality and safety standards.

**Decades of Industry and Product Experience** 

CO Unlocking Nature-Powered Success® A HURER COMPANY

### Modeling from QC data (gel application)

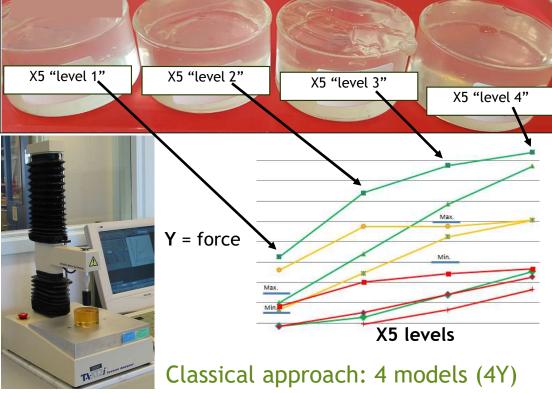

Measurements on sample: X1, X2 = fast = every day! X3 = slow = not measured daily

<u>QC - gel test system:</u> X4 = test system (3 to choose from) X5 = 4 levels of a gel-component —

Test gel

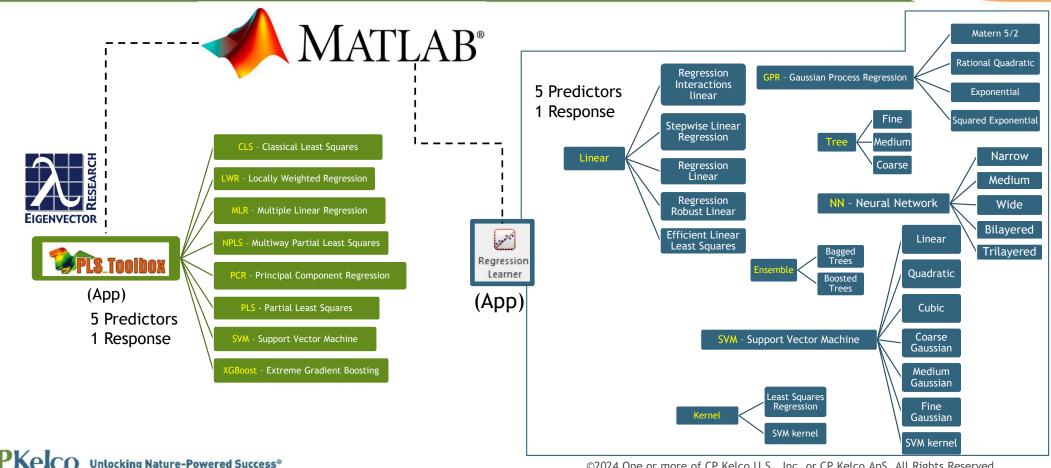

### New approach: 1 model?? (1Y)

Unlocking Nature-Powered Success®

X = predictor(s), Y = response(s)

### Machine Learning Apps and regression models tested

MatLab® is a trademark of The MathWorks, Inc.

A HUBER COMPANY

## Data structure and pre-processing

### Data

- **5 Discrete Predictors** (X1, X2, X3, X4, and X5) + **1 Response** (Force)
- No "Outliers" removed!

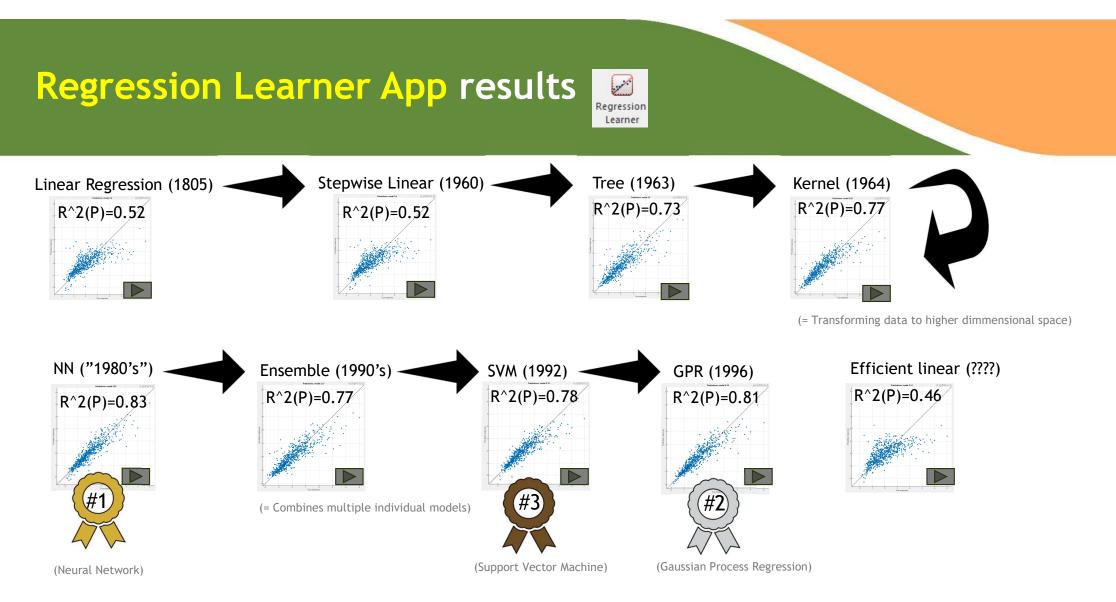

### **Pre-processing**

• Data was Autoscaled prior to training and testing

 All gel-test measurements (= X and Y data set) were randomized before splitting into 85% for training/cross validation (= 3584 gel-test measurements) 15% for testing (633 gel-test measurements)

COPKEICO Unlocking Nature-Powered Success®

### **About XGB**

### What is XGB?

**Extreme Gradient Boosting**, commonly known as **XGBoost (XGB**), is a **powerful machine learning algorithm** that has **gained popularity for its efficiency and performance** in predictive modeling tasks.

### **How XGBoost Works**

- <u>Boosting Technique</u>: XGBoost is based on the boosting technique, where multiple weak learners (usually decision trees) are combined to form a strong learner. Each new tree corrects the errors made by the previous trees.
- 2. <u>Gradient Descent</u>: It uses gradient descent to minimize the loss function. The algorithm **iteratively adds trees to the model**, each one aiming **to reduce the residual errors of the previous trees**.
- 3. <u>Regularization</u>: XGBoost includes regularization terms in its objective function to **prevent overfitting**. This makes it **more robust compared to other boosting algorithms**.
- 4. <u>Parallel Processing</u>: It supports parallel processing, which speeds up the training process significantly.
- **5. <u>Handling Missing Values</u>**: XGBoost can handle missing values internally, making it more versatile for real-world data.

### Pros

- •High Performance: XGBoost often outperforms other algorithms in terms of accuracy and speed.
- •Flexibility: It can be used for both classification and regression tasks.
- •**Feature Importance**: Provides **insights into feature importance**, helping in feature selection.
- •<u>Scalability</u>: Efficiently handles large datasets and can be distributed across clusters.
- •**Regularization**: Built-in regularization helps in **preventing overfitting**.

### Cons

- •**Complexity**: The algorithm can be complex to tune due to the large number of hyperparameters.
- •**Computationally Intensive**: Despite its efficiency, it can still be computationally intensive, especially for very large datasets.
- •**Interpretability**: Models can be less interpretable compared to simpler algorithms like linear regression or decision trees.

## Conclusion and next step

- Be creative with your data and how you use them (5X+1Y vs. 4X+4Y)
- Test many different models to increase chances to get Great prediction power!
- Build fewer but more flexible models if possible (vs. interpolation / maintenance )
- XGB (Extreme Gradient Boosting) is an interesting option for complex data!

• Next Step: Try XGB-prediction from only spectral X-predictors (= "instant predictions")

Many thanks  $A \otimes$ Now time for Questions...

# Experiences with XGB?

Other ideas/models to try out?

Other input/feedback?

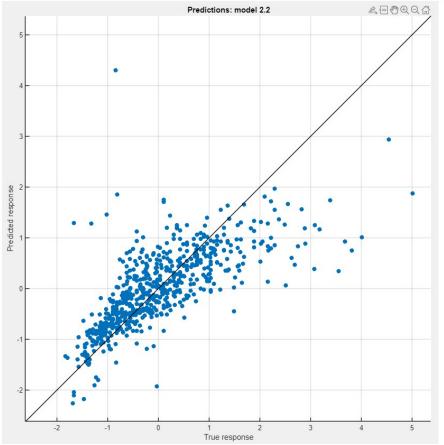

# Thanks for your attention!

### Linear Regression (1805)

2.2 Linear Regression

Model 2.2: Linear Regression Status: Tested

#### **Training Results**

RMSE (Validation)	0.63596
R-Squared (Validation)	0.59
MSE (Validation)	0.40444
MAE (Validation)	0.45746
MAPE (Validation)	167.9%
Prediction speed	~100000 obs/sec
Training time	9.2049 sec
Model size (Compact)	~12 kB

#### **Test Results**

 RMSE (Test)
 0.72135

 R-Squared (Test)
 0.52

 MSE (Test)
